Languages

English, Croatian

Programming

Experience using:

PHP, JavaScript

HTML & CSS

Familiar with:

Java, Python

C# (Silverlight), VB.Net

Scala, Racket, Octave

Db

MongoDB, MySQL

Os

Ubuntu, Debian

Fedora, CentOS

Windows

Additional

Git, Mercurial, SVN

Apache2, RabbitMQ

AWS, S3, Heroku

Summary

I've worked as a full stack and back-end software engineer. I prefer working with algorithms, databases, implementing APIs and doing system-wide optimizations, because I find them more challenging and therefore more interesting. This said, I would love to work more with functional programming.

Experience

2008-2014

Novatec

Team leader | Software engineer

In-house software engineer for my first two years. Became team leader building client's booking system and multiple customer-facing sites. Also served as project leader where I gathered requirements from clients, mentored junior engineers, planned and implemented critical features. My responsibilities included administration and optimization of MongoDB and MySQL DBs and Ubuntu/Debian servers.

2007-2008

Tempo

IT administrator

Responsible for Windows administration and user support, configuration and management of infrastructure and equipment in 8 remote offices. Managed system upgrade for compliance with EU customs legislation.

2005-2007

Vlado elektronika

Software and electrical QA engineer

Created hardware testbed and software for computer aided testing of intrusion alarm system. This system automated 90% of the tests and lowered the testing time by 60%.

Education

2013

BS of information tehnology

Veleuciliste u Rijeci (Rijeka College)

Silverlight 5 and MS Sync Framework

2002

Electrical engineering

Mate Blazina High School

DC servo driver controlled by IR remote
